K^0_L

$I(J^P) = \frac{1}{2}(0^-)$

$m_{K^0_L} - m_{K^0_S}$

For earlier measurements, beginning with GOOD 61 and FITCH 61, see our 1986 edition, Physics Letters **170B** 132 (1986).

OUR FIT is described in the note on "*CP* violation in K_L decays" in the K^0_L Particle Listings. The result labeled "OUR FIT Assuming *CPT*" ["OUR FIT Not assuming *CPT*"] includes all measurements except those with the comment "Not assuming *CPT*" ["Assuming *CPT*"]. Measurements with neither comment do not assume *CPT* and enter both fits.

[1] The two ABOUZAID 11 values use the same data. The first enters the "assuming *CPT*" fit and the second enters the "not assuming *CPT*" fit.

[2] ABOUZAID 11 fit has Δm, τ_S, ϕ_ϵ, Re(ϵ'/ϵ), and Im(ϵ'/ϵ) as free parameters. See Im(ϵ'/ϵ) in the "K^0_L *CP* violation" section for correlation information.

[3] ABOUZAID 11 fit has Δm and τ_S free but constrains ϕ_ϵ to the Superweak value, i.e. assumes *CPT*. See "K^0_S Mean Life" section for correlation information.

[4] Fits Δm and ϕ_{+-} simultaneously. GIBBONS 93C systematic error is from B. Winstein via private communication. 20–160 GeV *K* beams.

[5] GIBBONS 93 value assume $\phi_{+-} = \phi_{00} = \phi_{SW} = (43.7 \pm 0.2)^\circ$, i.e. assumes *CPT*. 20–160 GeV *K* beams.

[6] These two experiments have a common systematic error due to the uncertainty in the momentum scale, as pointed out in WAHL 89.

[7] GJESDAL 74 uses charge asymmetry in $K^0_{\ell 3}$ decays.

[8] ALAVI-HARATI 03 fit Δm and $\tau_{K^0_S}$ simultaneously. ϕ_{+-} is constrained to the Superweak value, i.e. *CPT* is assumed. See "K^0_S Mean Life" section for correlation information. Superseded by ABOUZAID 11.

[9] ALAVI-HARATI 03 fit Δm, ϕ_{+-}, and τ_{K_S} simultaneously. See ϕ_{+-} in the "K_L *CP* violation" section for correlation information. Superseded by ABOUZAID 11.

[10] ANGELOPOULOS 01 uses strong interactions strangeness tagging at two different times.

[11] Uses $\overline{K}^0_{e3}$ and K^0_{e3} strangeness tagging at production and decay. Assumes *CPT* conservation on $\Delta S{=}-\Delta Q$ transitions.

[12] ADLER 96C is the result of a fit which includes nearly the same data as entered into the "OUR FIT" value above.

[13] ARONSON 82 find that Δm may depend on the kaon energy.

[14] ARONSON 70 and CARNEGIE 71 use K^0_S mean life $= (0.862 \pm 0.006) \times 10^{-10}$ s. We have not attempted to adjust these values for the subsequent change in the K^0_S mean life or in η_{+-}.

K^0_L MEAN LIFE

VALUE (10^{-8} s)	*EVTS*	*DOCUMENT ID*		*TECN*	*COMMENT*
5.116±0.021 OUR FIT	Error includes scale factor of 1.1.				
5.099±0.021 OUR AVERAGE					
5.072±0.011±0.035	13M	[1] AMBROSINO	06	KLOE	$\sum_i$ B$_i = 1$
5.092±0.017±0.025	15M	AMBROSINO	05C	KLOE	
5.154±0.044	0.4M	VOSBURGH	72	CNTR	
• • • We do not use the following data for averages, fits, limits, etc. • • •					
5.15 ±0.14		DEVLIN	67	CNTR	

[1] AMBROSINO 06 uses $\phi \rightarrow K_L K_S$ with K_L tagged by $K_S \rightarrow \pi^+\pi^-$. The four major K_L BR's are measured, the small remainder ($\pi^+\pi^-$,$\pi^0\pi^0$,$\gamma\gamma$) is taken from PDG 04. This KLOE K_L lifetime is obtained by imposing $\sum_i$ B$_i = 1$. The correlation matrix among the four measured K_L BR's and this K_L lifetime is

	K_{e3}	$K_{\mu 3}$	$3\pi^0$	$\pi^+\pi^-\pi^0$	τ_{K_L}
K_{e3}	1	−0.25	−0.56	−0.07	0.25
$K_{\mu 3}$		1	−0.43	−0.20	0.33
$3\pi^0$			1	−0.39	−0.21
$\pi^+\pi^-\pi^0$				1	−0.39
τ_{K_L}					1

These correlations are taken into account in our fit. The average of this KLOE mean life measurement and the independent KLOE measurement in AMBROSINO 05C is $(5.084 \pm 0.023) \times 10^{-8}$ s.

Γ_{37}	$\pi^0\pi^0\mu^\pm e^\mp$	*LF*		$<$	1.7	$\times 10^{-10}$	CL=90%

[*a*] The value is for the sum of the charge states or particle/antiparticle states indicated.

[*b*] This mode includes gammas from inner bremsstrahlung but not the direct emission mode $K_L^0 \to \pi^+\pi^-\gamma$(DE).

[*c*] See the Particle Listings below for the energy limits used in this measurement.

[*d*] Most of this radiative mode, the low-momentum γ part, is also included in the parent mode listed without γ's.

[*e*] Allowed by higher-order electroweak interactions.

[*f*] Violates *CP* in leading order. Test of direct *CP* violation since the indirect *CP*-violating and *CP*-conserving contributions are expected to be suppressed.

CONSTRAINED FIT INFORMATION

An overall fit to the mean life and 15 branching ratios uses 27 measurements and one constraint to determine 11 parameters. The overall fit has a $\chi^2 = 37.4$ for 17 degrees of freedom.

The following *off-diagonal* array elements are the correlation coefficients $\left\langle\delta p_i \delta p_j\right\rangle/(\delta p_i \cdot \delta p_j)$, in percent, from the fit to parameters p_i, including the branching fractions, $x_i \equiv \Gamma_i/\Gamma_{\text{total}}$. The fit constrains the x_i whose labels appear in this array to sum to one.

10.02±0.17±0.29	19k	[1] ABOUZAID	07C	KTEV	M_{ee}> 5 MeV, E^*_{ee} > 30 MeV

[1] E^*_{ee} is the energy of the $e^+ e^-$ pair in the kaon rest frame. ABOUZAID 07C reports $[\Gamma(K^0_L \rightarrow \pi^{\pm} e^{\mp} \nu e^+ e^-)/\Gamma(K^0_L \rightarrow \pi^+ \pi^- \pi^0)]$ / $[B(\pi^0 \rightarrow e^+ e^- \gamma)] = (8.54 \pm 0.07 \pm 0.13) \times 10^{-3}$ which we multiply by our best value $B(\pi^0 \rightarrow e^+ e^- \gamma) = (1.174 \pm 0.035) \times 10^{-2}$. Our first error is their experiment's error and our second error is the systematic error from using our best value.

[1] AHN 19 result is based on data collected in 2015, which corresponds to 2.2×10^{19} protons on target. A single event sensitivity of $(1.30 \pm 0.01 \pm 0.14) \times 10^{-9}$ was achieved with no candidate events observed. An upper limit of $< 2.4 \times 10^{-9}$ at the 90% C.L. for the $K_L \to \pi^0 X^0$ decay was also set, where X^0 is an invisible particle with a mass of 135 MeV/c^2.

[2] AHN 17 result is based on the first 100 hours of physics running in 2013. One candidate event was observed with an expected background of 0.34 ± 0.16 events. An upper limit of $< 3.7 \times 10^{-8}$ at the 90% C.L. for the $K_L \to \pi^0 X^0$ decay was also set, where X^0 is an invisible particle with a mass of 135 MeV/c^2.

[3] Obtained combining Run-2 (AHN 08) and Run-3 data.

[4] Value obtained using data from February to April 2005.

[5] Value obtained analyzing 10% of data of RUN 1 (performed in 2004).

−3.3 ±1.1 ±0.7	5M	[2,3] SOMALWAR	92	E731

[1] Result obtained using CI3pI model of CABIBBO 05 to include $\pi\pi$ rescattering effects. The systematic error includes an external error of 1.06×10^{-3} from the parametrization input of $(a_0 - a_2)\, m_{\pi^+} = 0.268 \pm 0.017$ from BATLEY 06B.

[2] LAI 01B and SOMALWAR 92 results do not include $\pi\pi$ final state rescattering effects.

[3] SOMALWAR 92 chose m_{π^+} as normalization to make it compatible with the Particle Data Group $K_L^0 \to \pi^+\pi^-\pi^0$ definitions.

K_L^0 FORM FACTORS

For discussion, see note on form factors in the $K^\pm$ section of the Particle Listings above.

In the form factor comments, the following symbols are used.

f_+ and f_- are form factors for the vector matrix element.

f_S and f_T refer to the scalar and tensor term.

$f_0(t) = f_+(t) + f_-(t)\; t/(m^2_{K^0} - m^2_{\pi^+})$.

t = momentum transfer to the π.

λ_+ and λ_0 are the linear expansion coefficients of f_+ and f_0:

$f_+(t) = f_+(0)\;(1 + \lambda_+ t\,/m^2_{\pi^+})$

For quadratic expansion

$f_+(t) = f_+(0)\ (1 + \lambda'_+ t\ /m^2_{\pi^+} + \frac{\lambda''_+}{2}\ t^2/m^4_{\pi^+}\ )$

as used by KTeV. If there is a non-vanishing quadratic term, then λ_+ represents an average slope, which is then different from λ'_+.

NA48 (K_{e3}) and ISTRA quadratic expansion coefficients are converted with

$\lambda'_+{}^{PDG} = \lambda_+{}^{NA48}$ and $\lambda''_+{}^{PDG} = 2\ \lambda'_+{}^{NA48}$

$\lambda'_+{}^{PDG} = (\frac{m_{\pi^+}}{m_{\pi^0}})^2\ \lambda_+{}^{ISTRA}$ and

$\lambda''_+{}^{PDG} = 2\ (\frac{m_{\pi^+}}{m_{\pi^0}})^4\ \lambda'_+{}^{ISTRA}$

ISTRA linear expansion coefficients are converted with

$\lambda_+{}^{PDG} = (\frac{m_{\pi^+}}{m_{\pi^0}})^2\ \lambda_+{}^{ISTRA}$ and $\lambda_0{}^{PDG} = (\frac{m_{\pi^+}}{m_{\pi^0}})^2\ \lambda_0{}^{ISTRA}$

The pole parametrization is

$$f_+(t) = f_+(0)\ (\frac{M_V^2}{M_V^2 - t})$$

$$f_0(t) = f_0(0)\ (\frac{M_S^2}{M_S^2 - t})$$

where M_V and M_S are the vector and scalar pole masses.

The dispersive parametrization is

$$f_+(t) = f_+(0)\ \exp[\ \frac{t}{m_\pi^2}\ (\Lambda_+ + H(t))\ ];$$

$$f_0(t) = f_+(0)\ \exp[\ \frac{t}{m_K^2 - m_\pi^2}\ (\ln[C] - G(t))\ ],$$

where Λ_+ is the slope parameter and $\ln[C\,] = \ln[\ f_0\ (m_K^2 - m_\pi^2\ )\ ]$ is the logarithm of the scalar form factor at the Callan-Treiman point.

H(t) and *G(t)* are dispersive integrals.

The following abbreviations are used:

DP = Dalitz plot analysis.

PI = π spectrum analysis.

MU = μ spectrum analysis.

POL= μ polarization analysis.

BR = $K^0_{\mu 3}/K^0_{e3}$ branching ratio analysis.

E = positron or electron spectrum analysis.

RC = radiative corrections.

λ_+ (LINEAR ENERGY DEPENDENCE OF f_+ IN K^0_{e3} DECAY)

For radiative correction of K^0_{e3} DP, see GINSBERG 67, BECHERRAWY 70, CIRIGLIANO 02, CIRIGLIANO 04, and ANDRE 07. Results labeled OUR FIT are discussed in the review "$K^\pm_{\ell 3}$ and $K^0_{\ell 3}$ Form Factors" in the $K^\pm$ Listings. For earlier, lower statistics results, see the 2004 edition of this review, Physics Letters **B592** 1 (2004).

$\alpha^{\rm eff}_{K^*}$ DECAY FORM FACTOR FOR $K_L \to e^+ e^- e^+ e^-$

$\alpha^{\rm eff}_{K^*}$ is the parameter describing the relative strength of an intermediate pseudoscalar decay amplitude and a vector meson decay amplitude in the model of BERGSTROM 83. It takes into account both the radiative effects and the form factor. Since there are two $e^+ e^-$ pairs here compared with one in $e^+ e^- \gamma$ decays, a factorized expression is used for the $e^+ e^- e^+ e^-$ decay form factor.

CP Violation in K^0_L Decays

CP-VIOLATION PARAMETERS IN K^0_L DECAYS

CHARGE ASYMMETRY IN $K^0_{\ell 3}$ DECAYS

Such asymmetry violates CP. It is related to Re(ϵ).

A_L = weighted average of $A_L(\mu)$ and $A_L(e)$

In previous editions and in the literature the symbol used for this asymmetry was δ_L or δ. We use A_L for consistency with B^0 asymmetry notation and with recent K^0_S notation.

PARAMETERS FOR $K^0_L \to 2\pi$ DECAY

$\eta_{+-} = \mathrm{A}(K^0_L \to \pi^+\pi^-)$ / $\mathrm{A}(K^0_S \to \pi^+\pi^-)$
$\eta_{00} = \mathrm{A}(K^0_L \to \pi^0\pi^0)$ / $\mathrm{A}(K^0_S \to \pi^0\pi^0)$

The fitted values of $|\eta_{+-}|$ and $|\eta_{00}|$ given below are the results of a fit to $|\eta_{+-}|$, $|\eta_{00}|$, $|\eta_{00}/\eta_{+-}|$, and Re(ϵ'/ϵ). Independent information on $|\eta_{+-}|$ and $|\eta_{00}|$ can be obtained from the fitted values of the $K^0_L \to \pi\pi$ and $K^0_S \to \pi\pi$ branching ratios and the K^0_L and K^0_S lifetimes. This information is included as data in the $|\eta_{+-}|$ and $|\eta_{00}|$ sections with a Document ID "BRFIT." See the note "*CP* violation in K_L decays" above for details.

$|\eta_{00}| = |\mathrm{A}(K^0_L \to 2\pi^0)$ / $\mathrm{A}(K^0_S \to 2\pi^0)|$

[1] Value obtained from the NA48 measurements of $\Gamma(K^0_L \to \pi^+\pi^-)/\Gamma(K^0_L \to \pi e \nu_e)$ and $\tau_{K^0_S}$ and KLOE measurements of $\mathrm{B}(K^0_S \to \pi^+\pi^-)$ and $\tau_{K^0_L}$. $\Gamma(K^0_L \to \pi^+\pi^-)$ is defined to include the inner bremsstrahlung component $\Gamma(K^0_L \to \pi^+\pi^-\gamma(\mathrm{IB}))$ but exclude the direct emission component $\mathrm{B}(K^0_S \to \pi^+\pi^-(\mathrm{DE}))$. Their $|\eta_{+-}|$ value

is not directly used in our fit, but enters the fit via their branching ratio and lifetime measurements.

[2] AMBROSINO 06F uses KLOE branching ratios and τ_L together with τ_S from PDG 04. Their $|\eta_{+-}|$ value is not directly used in our fit, but enters the fit via their branching ratio and lifetime measurements.

[3] ALEXOPOULOS 04 $|\eta_{+-}|$ uses their $K^0_L \rightarrow \pi\pi$ branching fractions, $\tau_S = (0.8963 \pm 0.0005) \times 10^{-10}$ s from the average of KTeV and NA48 τ_S measurements, and assumes that $\Gamma(K^0_S \rightarrow \pi\ell\nu_\ell) = \Gamma(K^0_L \rightarrow \pi\ell\nu_\ell)$ giving $B(K^0_S \rightarrow \pi\ell\nu_\ell) = 0.118\%$. Their η_{+-} is not directly used in our fit, but enters our fit via their branching ratio measurements.

[4] APOSTOLAKIS 99C report $(2.264 \pm 0.023 \pm 0.026 + 9.1[\tau_s - 0.8934]) \times 10^{-3}$. We evaluate for our 2006 best value $\tau_s = (0.8958 \pm 0.0005) \times 10^{-10}$ s.

[5] ADLER 95B report $(2.312 \pm 0.043 \pm 0.030 - 1[\Delta m - 0.5274] + 9.1[\tau_s - 0.8926]) \times 10^{-3}$. We evaluate for our 1996 best values $\Delta m = (0.5304 \pm 0.0014) \times 10^{-10}\ \hbar s^{-1}$ and $\tau_s = (0.8927 \pm 0.0009) \times 10^{-10}$ s. Superseded by APOSTOLAKIS 99C.

$|\epsilon| = (2|\eta_{+-}| + |\eta_{00}|)/3$

This expression is a very good approximation, good to about one part in 10^{-4} because of the small measured value of $\phi_{00} - \phi_{+-}$ and small theoretical ambiguities.

VALUE (units 10^{-3})	*DOCUMENT ID*
2.228±0.011 OUR FIT Error includes scale factor of 1.8.

0.9939±0.0013±0.0015	1M	[1] BARR	93D	NA31
0.9899±0.0020±0.0025		[1] BURKHARDT	88	NA31

[1] This is the square root of the ratio R given by BURKHARDT 88 and BARR 93D.

[2] This is the combined results from BARR 93D and BURKHARDT 88, taking into account a common systematic uncertainty of 0.0014.

[3] We calculate $|\eta_{00}/\eta_{+-}| = 1-3(\epsilon'/\epsilon)$ from WOODS 88 (ϵ'/ϵ) value.

$\mathrm{Re}(\epsilon'/\epsilon) = (1-|\eta_{00}/\eta_{+-}|)/3$

We have neglected terms of order $\omega \cdot \mathrm{Re}(\epsilon'/\epsilon)$, where $\omega = \mathrm{Re}(A_2)/\mathrm{Re}(A_0) \simeq 1/22$. If included, this correction would lower $\mathrm{Re}(\epsilon'/\epsilon)$ by about 0.04×10^{-3}. See SOZZI 04.

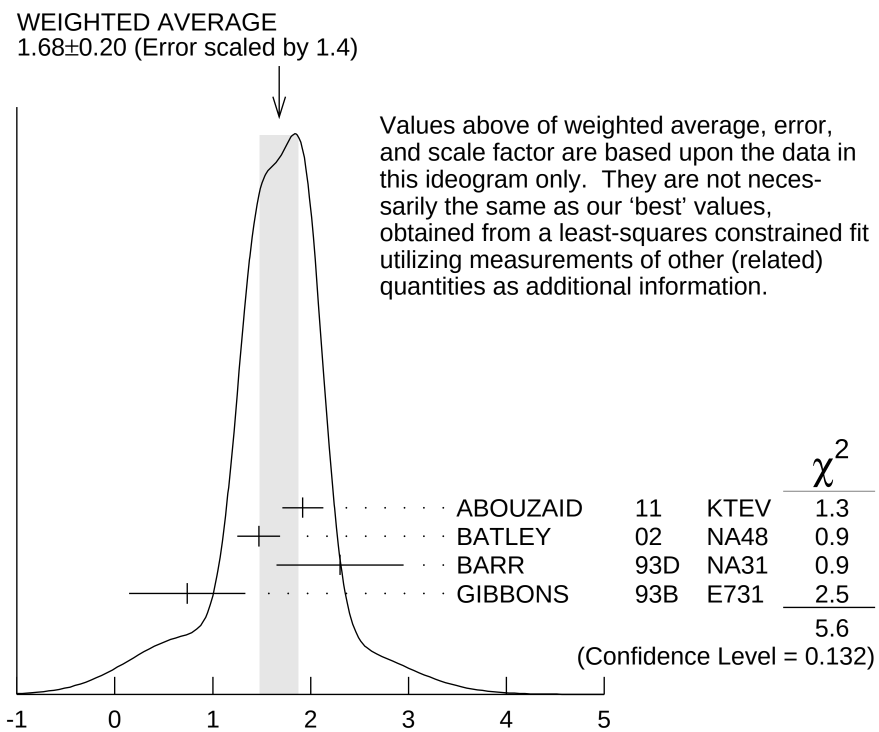
[1] The two ABOUZAID 11 values use the same data. The fits are performed with and without *CPT* invariance requirement.

[2] These values are derived from $\left|\eta_{00}/\eta_{+-}\right|$ measurements. They enter the average in this section but enter the fit via the $\left|\eta_{00}/\eta_{+-}\right|$ only.

[3] This is the combined results from BARR 93D and BURKHARDT 88, taking into account their common systematic uncertainty.

[4] We use ABOUZAID 11 Re(ϵ'/ϵ) value with *CPT* assumption in our fits for $\left|\eta_{+-}\right|$, $\left|\eta_{00}\right|$, and Re(ϵ'/ϵ).

[5] These values are derived from $\left|\eta_{00}/\eta_{+-}\right|$ measurements.



$\text{Re}(\epsilon'/\epsilon) = (1-\left|\eta_{00}/\eta_{+-}\right|)/3$

ϕ_{+-}, PHASE of η_{+-}

The dependence of the phase on Δm and τ_S is given for each experiment in the comments below, where Δm is the $K^0_L - K^0_S$ mass difference in units 10^{10} $\hbar s^{-1}$ and τ_s is the K_S mean life in units 10^{-10} s. We also give the regeneration phase ϕ_f in the comments below.

OUR FIT is described in the note on "*CP* violation in K_L decays" in the K^0_L Particle Listings. Most experiments in this section are included in both the "Not Assuming *CPT*" and "Assuming *CPT*" fits. In the latter fit, they have little direct influence on ϕ_{+-} because their errors are large compared to that assuming *CPT*, but they influence Δm and τ_s through their dependencies on these parameters, which are given in the footnotes.

44.3 ±2.8 ±0.2		[14] CARITHERS	75	SPEC	C regenerator

[1] APOSTOLAKIS 99C measures $\phi_{+-} = (43.19 \pm 0.53 \pm 0.28) + 300\,[\Delta m - 0.5301]$ (°). We have adjusted the measurement to use our best values of ($\Delta m = 0.5293 \pm 0.0009$) ($10^{10}$ $\hbar$ s^{-1}). Our first error is their experiment's error and our second error is the systematic error from using our best values.

[2] SCHWINGENHEUER 95 measures $\phi_{+-} = (43.53 \pm 0.76) + 173\,[\Delta m - 0.5282] - 275\,[\tau_s - 0.8926]$ (°). We have adjusted the measurement to use our best values of ($\Delta m = 0.5293 \pm 0.0009$) ($10^{10}$ $\hbar$ s^{-1}), ($\tau_s = 0.8954 \pm 0.0004$) ($10^{-10}$ s). Our first error is their experiment's error and our second error is the systematic error from using our best values.

[3] These experiments measure ϕ_{+-}–ϕ_f and calculate the regeneration phase from the power law momentum dependence of the regeneration amplitude using analyticity and dispersion relations. SCHWINGENHEUER 95 [GIBBONS 93] includes a systematic error of 0.35° [0.5°] for uncertainties in their modeling of the regeneration amplitude.

[4] GIBBONS 93 measures $\phi_{+-} = (42.21 \pm 0.9) + 189\,[\Delta m - 0.5257] - 460\,[\tau_s - 0.8922]$ (°). We have adjusted the measurement to use our best values of ($\Delta m = 0.5293 \pm 0.0009$) ($10^{10}$ $\hbar$ s^{-1}), ($\tau_s = 0.8954 \pm 0.0004$) ($10^{-10}$ s). Our first error is their experiment's error and our second error is the systematic error from using our best values. This is actually reported in SCHWINGENHEUER 95, footnote 8. GIBBONS 93 reports ϕ_{+-} $(42.2 \pm 1.4)^\circ$. They measure ϕ_{+}–ϕ_f and calculate the regeneration phase ϕ_f from the power law momentum dependence of the regeneration amplitude using analyticity. An error of 0.6° is included for possible uncertainties in the regeneration phase.

[5] CAROSI 90 measures ϕ_{+-} = (46.9 ± 1.4 ± 0.7) + 579 [$\Delta m -$ 0.5351] + 303 [$\tau_s -$ 0.8922] (°). We have adjusted the measurement to use our best values of (Δm = 0.5293 ± 0.0009) (10^{10} $\hbar$ s^{-1}), (τ_s = 0.8954 ± 0.0004) (10^{-10} s). Our first error is their experiment's error and our second error is the systematic error from using our best values.

[6] GEWENIGER 74B measures ϕ_{+-} = (49.4 ± 1.0) + 565 [$\Delta m -$ 0.540] (°). We have adjusted the measurement to use our best values of (Δm = 0.5293 ± 0.0009) (10^{10} $\hbar$ s^{-1}). Our first error is their experiment's error and our second error is the systematic error from using our best values.

[7] Not independent of other phase parameters reported in ABOUZAID 11.

[8] ALAVI-HARATI 03 ϕ_{+-} is correlated with their $\Delta m = m_{K^0_L} - m_{K^0_S}$ and τ_{K_S} measurements in the K^0_L and K^0_S sections respectively. The correlation coefficients are $\rho(\phi_{+-},\Delta m)$=+0.955, $\rho(\phi_{+-},\tau_S)$=−0.871, and $\rho(\tau_S,\Delta m)$=−0.840. *CPT* is not assumed. Uses scintillator Pb regenerator. Superseded by ABOUZAID 11.

[9] ADLER 96C measures ϕ_{+-} = (43.82 ± 0.41) + 339 [$\Delta m -$ 0.5307] − 252 [$\tau_s -$ 0.8922] (°). We have adjusted the measurement to use our best values of (Δm = 0.5293 ± 0.0009) (10^{10} $\hbar$ s^{-1}), (τ_s = 0.8954 ± 0.0004) (10^{-10} s). Our first error is their experiment's error and our second error is the systematic error from using our best values.

[10] ADLER 96C is the result of a fit which includes nearly the same data as entered into the "OUR FIT" value in the 1996 edition of this Review (Physical Review **D54** 1 (1996)).

[11] ADLER 95B measures ϕ_{+-} = (42.7 ± 0.9 ± 0.6) + 316 [$\Delta m -$ 0.5274] + 30 [$\tau_s -$ 0.8926] (°). We have adjusted the measurement to use our best values of (Δm = 0.5293 ± 0.0009) (10^{10} $\hbar$ s^{-1}), (τ_s = 0.8954 ± 0.0004) (10^{-10} s). Our first error is their experiment's error and our second error is the systematic error from using our best values.

[12] ADLER 92B quote separately two systematic errors: ±0.4 from their experiment and ±1.0 degrees due to the uncertainty in the value of Δm.

[13] KARLSSON 90 systematic error does not include regeneration phase uncertainty.

[14] CARITHERS 75 measures ϕ_{+-} = (45.5 ± 2.8) + 224 [$\Delta m -$ 0.5348] (°). We have adjusted the measurement to use our best values of (Δm = 0.5293 ± 0.0009) (10^{10} $\hbar$ s^{-1}). Our first error is their experiment's error and our second error is the systematic error from using our best values. $\phi_f = -40.9 \pm 2.6°$.

ϕ_{00}, PHASE OF η_{00}

See comment in ϕ_{+-} header above for treatment of Δm and τ_s dependence, as well as for the inclusion of data in both the "Assuming *CPT*" and "Not Assuming *CPT*" fits.

OUR FIT is described in the note on "*CP* violation in K_L decays" in the K^0_L Particle Listings.

VALUE (°)	DOCUMENT ID		TECN	COMMENT
43.52±0.05 OUR FIT	Error includes scale factor of 1.3. Assuming *CPT*			
43.7 ±0.6 OUR FIT	Error includes scale factor of 1.2. Not assuming *CPT*			
44.5 ±2.3 ±0.5	[1] CAROSI	90	NA31	
• • • We do not use the following data for averages, fits, limits, etc. • • •				
44.06±0.68	[2] ABOUZAID	11	KTEV	Not assuming *CPT*
41.7 ±5.9 ±0.2	[3] ANGELOPO...	98	CPLR	
50.8 ±7.1 ±1.7	[4] ADLER	96B	CPLR	Sup. by ANGELOPOULOS 98
47.4 ±1.4 ±0.9	[5] KARLSSON	90	E731	

[1] CAROSI 90 measures ϕ_{00} = (47.1 ± 2.1 ± 1.0) + 579 [$\Delta m -$ 0.5351] + 252 [$\tau_S -$ 0.8922] (°). We have adjusted the measurement to use our best values of (Δm = 0.5293 ± 0.0009) (10^{10} $\hbar$ s^{-1}), (τ_S = 0.8954 ± 0.0004) (10^{-10} s). Our first error is their experiment's error and our second error is the systematic error from using our best values.

[2] Not independent of other phase parameters reported in ABOUZAID 11.

[3] ANGELOPOULOS 98 measures ϕ_{00} = (42.0 ± 5.6 ± 1.9) + 240 [$\Delta m -$ 0.5307] (°). We have adjusted the measurement to use our best values of (Δm = 0.5293 ± 0.0009) (10^{10} $\hbar$ s^{-1}). Our first error is their experiment's error and our second error is the systematic error from using our best values. The τ_S dependence is negligible.

[4] ADLER 96B identified initial neutral kaon individually as being a K^0 or a $\overline{K}^0$. The systematic uncertainty is ±1.5° combined in quadrature with ±0.8° due to Δm.

[5] KARLSSON 90 systematic error does not include regeneration phase uncertainty.

$\phi_\epsilon = (2\phi_{+-} + \phi_{00})/3$

This expression is a very good approximation, good to about 10^{-3} degrees because of the small measured values of $\phi_{00} - \phi_{+-}$ and Re ϵ'/ϵ, and small theoretical ambiguities.

VALUE (°)	DOCUMENT ID		TECN	COMMENT
43.52 ±0.05 OUR FIT	Error includes scale factor of 1.2. Assuming *CPT*			
43.5 ±0.5 OUR FIT	Error includes scale factor of 1.3. Not assuming *CPT*			
43.5164±0.0002±0.0518	[1] SUPERWEAK	16		Assuming *CPT*
43.86 ±0.63	[2] ABOUZAID	11	KTEV	Not assuming *CPT*

[1] SUPERWEAK 16 is a fake measurement used to impose the *CPT* or Superweak constraint $\phi_{+-} = \phi_{SW} = \tan^{-1}[2\,\frac{\Delta m}{\hbar}\,(\frac{\tau_S \tau_L}{\tau_L - \tau_S})]$. This "measurement" is linearized using values near the PDG 04 edition values of Δm, τ_S and τ_L, and then adjusted to our current values as described in the following "measurement". SUPERWEAK 16 measures ϕ_ϵ = (43.50258 ± 0.00021) + 54.1 [$\Delta m -$ 0.5289] + 32.0 [$\tau_S -$ 0.89564] (°). We have adjusted the measurement to use our best values of (Δm = 0.5293 ± 0.0009) (10^{10} $\hbar$ s^{-1}), (τ_S = 0.8954 ± 0.0004) (10^{-10} s). Our first error is their experiment's error and our second error is the systematic error from using our best values.

[2] ABOUZAID 11 uses the full KTeV dataset collected in 1996, 1997, and 1999. See Im(ϵ'/ϵ) section for correlation information.

$\mathrm{Im}(\epsilon'/\epsilon) = -(\phi_{00} - \phi_{+-})/3$

For small $|\epsilon'/\epsilon|$, Im(ϵ'/ϵ) is related to the phases of η_{00} and η_{+-} by the above expression.

VALUE (°)	DOCUMENT ID		TECN	COMMENT
−0.002 ±0.005 OUR FIT	Error includes scale factor of 1.7. Assuming *CPT*			
−0.11 ±0.11 OUR FIT	Not assuming *CPT*			
−0.0985±0.1157	[1] ABOUZAID	11	KTEV	Not assuming *CPT*

[1] ABOUZAID 11 uses the full KTeV dataset collected in 1996, 1997, and 1999. The fit has Δm, τ_S, ϕ_ϵ, Re(ϵ'/ϵ), and Im(ϵ'/ϵ) as free parameters. The reported value of Im(ϵ'/ϵ) = (−17.20 ± 20.20) × 10^{-4} rad. The correlation coefficients are $\rho(\phi_\epsilon, \Delta m)$ = 0.828, $\rho(\phi_\epsilon, \tau_S)$ = −0.765, $\rho(\Delta m, \tau_S)$ = −0.858, ρ(Im(ϵ'/ϵ), ϕ_ϵ) = −0.041, ρ(Im(ϵ'/ϵ), Δm) = 0.026, ρ(Im(ϵ'/ϵ), τ_S) = −0.010.

DECAY-PLANE ASYMMETRY IN $\pi^+\pi^- e^+ e^-$ DECAYS

This is the *CP*-violating asymmetry

$$A = \frac{N_{\sin\phi\cos\phi>0.0} - N_{\sin\phi\cos\phi<0.0}}{N_{\sin\phi\cos\phi>0.0} + N_{\sin\phi\cos\phi<0.0}}$$

where ϕ is the angle between the e^+e^- and $\pi^+\pi^-$ planes in the K^0_L rest frame.

[1] SUPERWEAK 16 is a fake experiment to constrain $\phi_{00} - \phi_{+-}$ to a small value as described in the note "CP violation in K_L decays."

[2] This SCHWINGENHEUER 95 values is the combined result of SCHWINGENHEUER 95 and GIBBONS 93, accounting for correlated systematic errors.

[3] Not independent of other phase parameters reported in ABOUZAID 11.

[4] ALAVI-HARATI 03 fit $\mathrm{Re}(\epsilon'/\epsilon)$, $\mathrm{Im}(\epsilon'/\epsilon)$, Δm, τ_S, and ϕ_{+-} simultaneously, not assuming CPT. Phase difference is obtained from $\phi_{00} - \phi_{+-} \approx -3\mathrm{Im}(\epsilon'/\epsilon)$ for small $|\epsilon'/\epsilon|$. Superseded by ABOUZAID 11.

[5] GIBBONS 93 give detailed dependence of systematic error on lifetime (see the section on the K^0_S mean life) and mass difference (see the section on $m_{K^0_L} - m_{K^0_S}$).

[6] CAROSI 90 is excluded from the fit because it it is not independent of ϕ_{+-} and ϕ_{00} values.

PHASE DIFFERENCE $\phi_{+-} - \phi_{SW}$

Test of CPT. The Superweak phase $\phi_{SW} \equiv \tan^{-1}(2\Delta m/\Delta\Gamma)$ where $\Delta m = m_{K^0_L} - m_{K^0_S}$ and $\Delta\Gamma = \hbar(\tau_L - \tau_S)/(\tau_L \tau_S)$.

VALUE (°)	DOCUMENT ID		TECN
0.61±0.62±1.01	[1] ALAVI-HARATI	03	KTEV

[1] ALAVI-HARATI 03 fit is the same as their ϕ_{+-}, τ_{K_S}, Δm fit, except that the parameter $\phi_{+-} - \phi_{SW}$ is used in place of ϕ.

$\mathrm{Re}(\frac{2}{3}\eta_{+-} + \frac{1}{3}\eta_{00}) - \frac{A_L}{2}$

Test of CPT

VALUE (units 10^{-6})	DOCUMENT ID		TECN	COMMENT
−3±35	[1] ALAVI-HARATI	02	E799	Uses A_L from K_{e3} decays

[1] ALAVI-HARATI 02 uses PDG 00 values of η_{+-} and η_{00}.

$\Delta S = \Delta Q$ IN K^0 DECAYS

The relative amount of $\Delta S \neq \Delta Q$ component present is measured by the parameter x, defined as

$$x = A(\overline{K}^0 \rightarrow \pi^- \ell^+ \nu)/A(K^0 \rightarrow \pi^- \ell^+ \nu) .$$

We list Re$\{x\}$ and Im$\{x\}$ for K_{e3} and $K_{\mu 3}$ combined.

$x = A(\overline{K}^0 \rightarrow \pi^- \ell^+ \nu)/A(K^0 \rightarrow \pi^- \ell^+ \nu) = A(\Delta S{=}-\Delta Q)/A(\Delta S{=}\Delta Q)$

[2] BURGUN 72 is a final result which includes BURGUN 71.
[3] First GRAHAM 72 value is second GRAHAM 72 value combined with MANTSCH 72.
[4] Footnote 10 of HILL 67 should read +0.58, not −0.58 (private communication) CHO 70 is analysis of unambiguous events in new data and HILL 67.
[5] BALDO-CEOLIN 65 gives x and θ converted by us to Re(x) and Im(x).
[6] FRANZINI 65 gives x and θ for Re(x) and Im(x). See SCHMIDT 67.
